

Illuminating Data

Covance Clinical illuminating data provides an unrivalled, powerful combination of data sources to drive informed decision-making. See the power of these sources.

Sources of Data

LabCorp De-Identified Data

LabCorp is one of the largest single sources of diagnostic lab data in the world. Timely, real-world diagnostic lab results data – with 30 billion test results across 5,000 assays from 150 million people in the US – can be used to identify clusters of people that meet a study's eligibility criteria.

Global Central Labs Data

Covance generates more clinical trial data than anyone else in the world. With performance data on >50% of all global clinical trials, including 175,000 unique investigators across >50 countries we can identify the most productive investigators by indication to consider for a trial.

Patient Intelligence Database

We have insights from patients who live with a disease, covering more than 50 indications from 30 countries. This enables us to help deliver faster patient enrollment and enhanced patient retention.

Patient Direct

Patient direct creates a direct connection to 150 million US-based people, enabling us to invite them to participate in clinical studies.

Biomarker Solution Center

Biomarkers increase the probability of approval for Phase I-IV studies. The number of clinical studies conducted that are approved using biomarkers is 25.9% vs 8.4% without.
